an easier way to test and evaluate end to end complicated problems.

Scenario Testing in software testing is a method in which actual scenarios are used for

testing the software application instead of test cases. The purpose of scenario testing is to

test end to end scenarios for a specific complex problem of the software. Scenarios help in

Acústica Médica

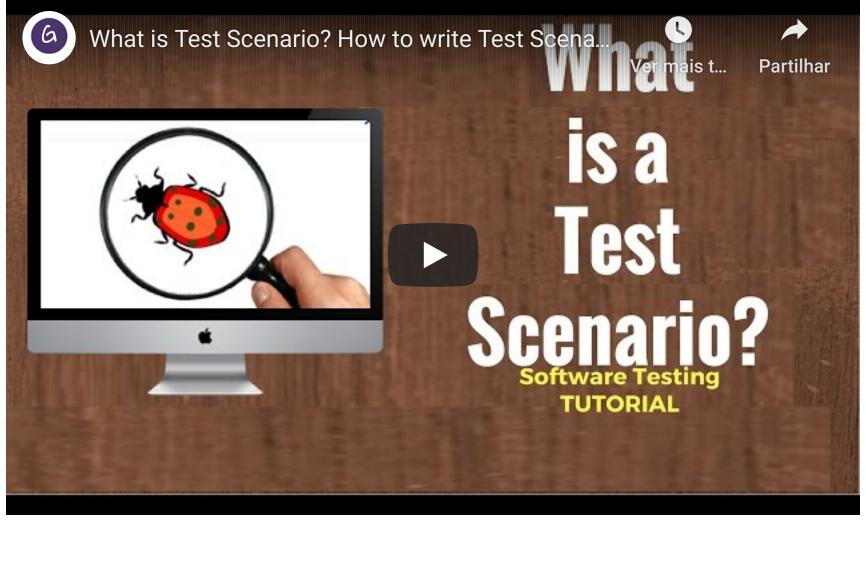

A TEST SCENARIO is defined as any Under Test.

What is a Test Scenario?

functionality that can be tested. It is also called Test Condition or Test Possibility. As a tester, you should put yourself in the end user's shoes and figure out the real-world scenarios and use cases of the Application

Scenario Testing

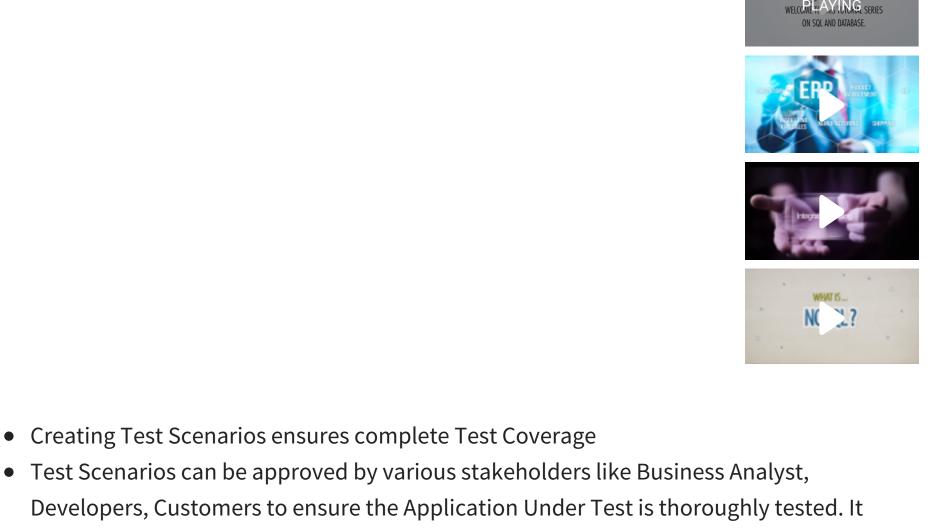

Let's study this with the help of the video below -

FEATURED VIDEOS

Why create Test Scenarios?

Test Scenarios are created for the following reasons,

• They serve as a quick tool to determine the testing work effort and accordingly create a

• Creating Test Scenarios ensures complete Test Coverage

proposal for the client or organize the workforce. • They help determine the most important end-to-end transactions or the real use of the software applications. • For studying the end-to-end functioning of the program, Test Scenario is critical.

ensures that the software is working for the most common use cases.

- When not create Test Scenario?
- Test Scenarios may not be created when
- The Application Under Test is complicated, unstable and there is a time crunch in the project.

• Projects that follow Agile Methodology like Scrum, Kanban may not create Test

• Test Scenario may not be created for a new bug fix or Regression Testing. In such cases, Test Scenarios must be already heavily documented in the previous test cycles. This is especially true for Maintenance projects.

How to Write Test Scenarios

per the Project Methodology.

Scenarios.

tested.

As a tester, you can follow these five steps to create Test Scenarios-

different test scenarios that verify each feature of the software.

have a Test Scenario that checks that requirement in isolation.

• Step 2: For each requirement, figure out possible users actions and objectives. Determine the technical aspects of the requirement. Ascertain possible scenarios of system abuse and evaluate users with hacker's mindset.

(SUT). You could also refer uses cases, books, manuals, etc. of the application to be

- Step 4: Once you have listed all possible Test Scenarios, a Traceability Matrix is created to verify that each & every requirement has a corresponding Test Scenario • Step 5: The scenarios created are reviewed by your supervisor. Later, they are also reviewed by other Stakeholders in the project.
- **Tips to Create Test Scenarios**

• Each Test Scenario should be tied to a minimum of one Requirement or User Story as

• Before creating a Test Scenario that verifies multiple Requirements at once, ensure you

- Avoid creating overly complicated Test Scenarios spanning multiple Requirements. • The number of scenarios may be large, and it is expensive to run them all. Based on customer priorities only run selected Test Scenarios
- For an eCommerce Application, a few test scenarios would be

Example 1: Test Scenario for eCommerce Application

Sign in Email (phone for mobile accounts)

Password

6. Check Forgot your password is working as expected

Test Scenario 3: Check the Product Description Page

8. Check system behavior when "Keep me signed" is checked

Test Scenario 1: Check the Login Functionality

Sign in □ Keep me signed in. Details ▼ New to Amazon? Create your Amazon account In order to help you understand the difference Test Scenario and Test Cases, specific test cases for this Test Scenario would be 1. Check system behavior when valid email id and password is entered. 2. Check system behavior when *invalid* email id and *valid* password is entered. 3. Check system behavior when *valid* email id and *invalid* password is entered. 4. Check system behavior when invalid email id and invalid password is entered. 5. Check system behavior when email id and password are left blank and Sign in entered.

Forgot your password?

As evident, Test Cases are more specific. **Test Scenario 2:** Check the Search Functionality
